

Why is Whole Milk standardized to 3.25% fat?

Milk straight from the cow can range 3% to 6% fat. The national average fluctuates from 3.2 to 3.9% fat, which is influenced by season, weather, feed and breed of cattle. Real Whole Milk is standardized for sale at 3.25% fat to be consistent year-round and ensure consistently accurate labeling. Standardization also allows excess fat from above average cows and conditions to be skimmed to make ice cream, butter and more!
